Samba 4.0 (2 / 12)

Michael Adam

about:SerNet

- OpenSource/Linux centric company in Germany
- founded 1996
- today: 40-50 employees
- Samba department: 5 Samba core team members including the release manager
- Samba development and consulting as a service
- sambaXP : annual samba developer and user conference

SAMBA

- Samba development and consulting as a service
- sambaXP : annual samba developer and user conference

Samba 4.0 (3 / 12)

S'AMBA

Michael Adam

- stable release, found in the Linux distributions
- current: 3.6.3
- file server (smbd)
- all-active clustering with CTDB
- windows AD domain member (winbindd)
- windows NT (like) domain controller
- some 10+ active developers
- currently: SMB2: 2.0, 2.1, 2.2 (Windows 8)

Samba 4.0 ... this year?

- Some features of AD are "ready"
- ▶ Some others are not.... ☺
- 4.0 will be the successor of 3.X
- ► ⇒ file server should work like Samba3's smbd

S'AMBA

- use the best of both worlds
 - ad-server of Samba4
 - smbd of Samba3
 - rpc-services mix both worlds

SerNet

and stitch them together...

- Combined Code base: source3/ and source4/
- more and more commonly used libraries and subsystems (tdb, talloc, tevent, pidl, librpc (parts), cldap, ...)
- integration of smbd with samba (s3fs)
- DNS: started internal DNS server (for ease of use) mature integration with bind 9.8.1

SerNet

What Does Already Work?

- single domain single DC
- multiple DCs with some hacks (FS replication)
- joining workstations, automatic dns updates
- management with
 Windows-tools
 (mmc, active directory users and computers, ...)
- group policies (management via mmc)
- schema extensions: e.g.
 Zarafa-integration
 (open source group ware)
